1 Product Overview

AVL08 is a GPS/GSM/GPRS tracking device which is specially developed and designed for vehicle real-time tracking and security. With superior GPS and GPRS modules, AVL08 has good sensitivity and stable performance. It can get accurate GPS fix even in remote places.

1.1 Key Features

- **High sensitive SIRFIII Star GPS Chipset and advanced multi-band GSM module;**
- **GPS/GSM/GPRS/SMS connection;**
- **Remote control via mobile phone or computer;**
- **Fast signal acquisition;**
- **Excellent locating capability under weak signal enviroment;**
- **Locate single waypoint or track continuously;**
- **Locate at preset time interval or real time;**
- **Living tracking on map;**
- **Send SOS message for emergency rescue;**
- **Send low power notification when battery will die out;**
- **Send over speed alarm when vehicle moves over restricted speed;**
- **Send geo-fence alarm when vehicle exits or enters restricted area;**
- **Build-in motion sensor;**
- **Sleep when no motion;**
- **Send parking alarm when someone move vehicle;**
- **Detect working status periodically like hear-beat rate;**
- **Send power disconnection alarm when someone cuts off power line;**
- **Cut off engine instantly or in on-off mode when someone drives vehicle;**

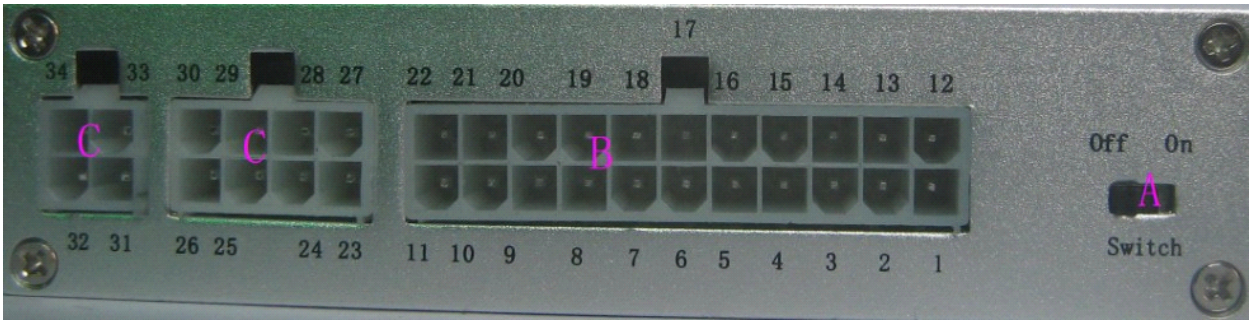
- **Turn on or off door-lock;**
- **Measure oil, water temperature and air temperature;**
- **Detect on/off status such as engine, ACC, doors etc;**
- **Store data in flash when no GPRS and send when GPRS recovers;**
- **Monitor enviroment voice;**
- **Two-way conversation;**
- **Find out the GSM cell ID which SIM card is currently attached to;**
- **Odometer;**
- **Connect serial port devices such as camera, DVR, LCD, barcode or RFID reader and printer etc;**
- **2 switch inputs, 2 analog inputs, 4 digital inputs, 4 digital outputs, 2 serial inputs and 1 mini USB port;**
- **Set parameters via mobile phone or configuration software;**
- **Update firmware via hyper terminal;**
- **Rechargeable li-polymer battery;**
- **TCP/UDP protocol;**
- **Perfect manage application for car, taxi, bus, truck, van and trailer etc.**

1.2 Specifications

Feature	Characteristics
Dimension	108mm*58mm*28mm
N.W	140g
Exterior Power Supply	DC 12V – 24V
Inner lithium battery	DC 3.7V
Standby time	About 72 hours
Work time	About 12 hours
Exterior GSM antenna	Receive GSM signal better
Exterior GPS antenna	Receive GPS signal better
Operating Temperature Range	-20℃ to +60℃
Air pressure	860Kpa –1060Kpa
Humidity	Up to 75% non-codensing
Position accuracy	10 –15 meters
GSM chip	support 3 frequency GSM 900/1800 /1900MHZ
GPS chip	Sirf-Star III (super-sensitivity and high accuracy)
Hot start	1 sec, average

Warm start	**38 sec, average**
Cold start	**42 sec, average**
LED	**3 LEDs indicates GSM signal, GPS signal, power on and GSM module, charge LEDs**
Button(not in the basic version)	**2 buttons, report location**
GPS Chipset	**SIRF StarIII**
GSM Module	**Simcom GSM900/1800/1900 MHz or 850/900/1800/1900 MHz**
Exterior Power Supply	**DC 12V – 24V**
Inner lithium battery	**DC 3.7V**
Air pressure	**860Kpa –1060Kpa**
Humidity	**Up to 75% non-codensing**
Position accuracy	**10 –15 meters**
GPRS Protocol	**TCP/UDP**
Position Accuracy	**10-15 meters**
Hot Start	**1 second**
Warm Start	**38 seconds**
Cold Start	**42 seconds**
Exterior GSM antenna	**Receive GSM signal better**
Exterior GPS antenna	**Receive GPS signal better**
LED light	**Power(Tremble)/GSM/GPS**
I/O Port	**2 switch input ports, 2 analog input ports, 2 digital input ports, 4 digital output ports, 2 serial input ports and 1 mini USB port**
Motion Sensor	**Build-in**
Flash Memory	**32Mb flash (save more than 10,000 points)**
Microphone/speaker	**High sensitivity**

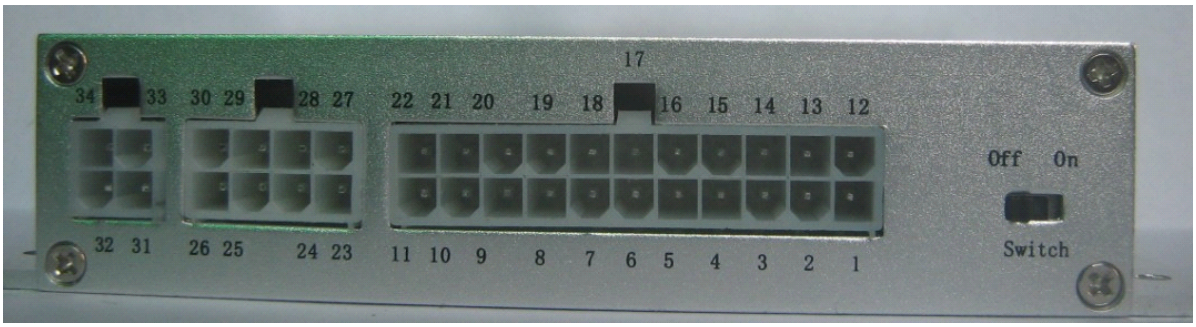
1.3 Outside feature



1.3.1 Socket and Switch

Hardware	Function
A. Switch	Turn on /off the unit
B. I/O Sockets	Expanding function, as below
C. Serial port	Connect to the external peripheral
D. USB Port	Support "USB Converter" to update firmware
E. GPS Antenna socket	Connect Exterior GPS Antenna
F. GSM Antenna socket	Connect Exterior GSM Antenna
G. SIM Card Holder	Hold a SIM card
H. Power indicator light	When the unit charging, two lights is blinking (Red/Green)
I. Buzzer hole	The sound send from it
J. Three LED	GSM LED(Right), Power& tremble Led, GPS Led

1.3.2 I/O ports



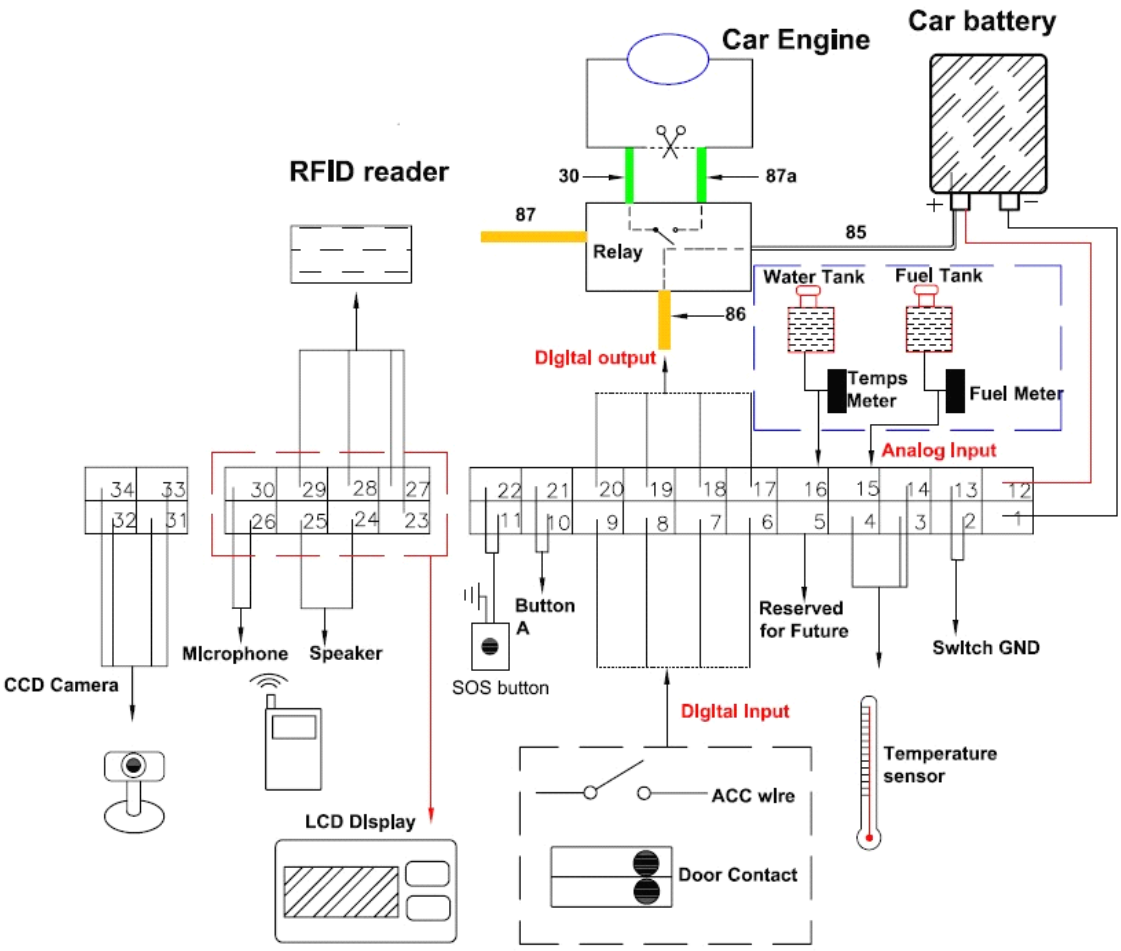
The function is as below:

NO.	Function
I/O 01	GND
I/O 02	Switch GND
I/O 03	VCC +5V
I/O 04	Connect to the temperature sensor
I/O 05	Output
I/O 06	Digital input 4
I/O 07	Digital input 3
I/O 08	Digital input 2
I/O 09	Digital input 1
I/O 10	Button A
I/O 11	SOS button
I/O 12	VCC +12V
I/O 13	GND
I/O 14	GND
I/O 15	ADB
I/O 16	ADA
I/O 17	Digital output 4
I/O 18	Digital output 3
I/O 19	Digital output 2
I/O 20	Digital output 1
I/O 21	GND
I/O 22	GND
I/O 23 I/O 27 I/O 28 I/O 29	Serial input ports 1

I/O 24 I/O 25	Speaker
I/O 26 I/O 30	MIC-phone
I/O 31 I/O 32 I/O 33 I/O 34	Serial input ports 2

Note: The port that no mark is leaving to customize.

Ports Graphics



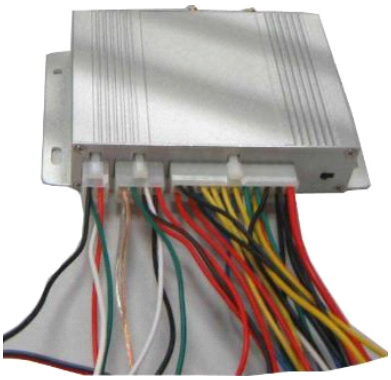
1.3.3 LED Indicators

LED	State	Description
GPS Indicator (Blue LED)	light 0.1s dark 2.9s	GPS Signal Well
	light 1s dark 2s	No GPS Signal
	light 0.5s dark 0.5s	GPS Fault
Tremble Indicator (Red LED)	light 0.1s dark 0.1s	System Initial
	always light	On Tremble
GSM Indicator (Green LED)	light 0.1s dark 0.1s	System Initial
	light 0.1s dark 2.9s	GSM Signal Well
	light 1s dark 2s	No GSM Signal
	always dark	No SIM Card Or Bad SIM Card
	light 0.1s dark 0.1s (flash three times)	Call Ring
	always light	In A Call
	light 0.1s dark 0.3s (flash five times)	Send A SMS
	light 0.1s dark 0.3s (flash five times)	Receive A SMS
	light 0.1s dark 1s	Connect to GPRS
Power indicator light (Green/Red LEDs)	The green led lighting sustained	End charging
	The red led lighting sustained	In charging

When AVL is in work mode, if GSM signal is in good state, the green led will flash, similarly, if GPS signal is in good state, the blue led will flash, if the green led is not flashing, that indicates the GSM signal is not good, if the blue led is not flashing, then you should check if there is something upon the GPS antenna top. Further, if you find the three LEDs are dark, maybe the AVL entered into "sleep-mode" or there is no power in the AVL unit.

1.3.4 Connect to the external peripheral by Serial Port

The AVL08 have two Serial ports, they could connect to the card reader, camera, RFID reader, DVR, LCD and so on.



How to connect the peripheral equipment

1. Introduce of the serial input port

AVL08 have two serial input ports, they have the same function, but we define that:

Serial input 1 connect the RFID card reader, Serial input 2 connect the DVR or camera.

Serial input 1: (Pin 23,27,28,29)

Pin 23(Black)----------GND

Pin 27(Red)----------ACC(5V)

Pin 28(Brown)----------TXD (send data)

Pin 29(White)----------RXD (receive data)

Serial input 2: (Pin 31,32,33,34)

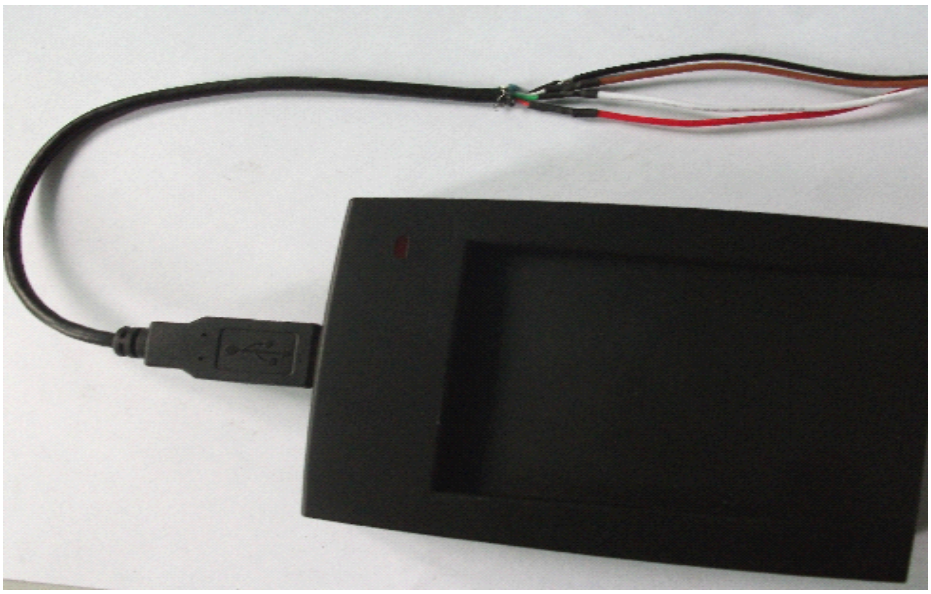
Pin 34(Black)----------GND

Pin 33(Red)----------ACC(5V)

Pin 31(Brown)----------TXD (send data)

Pin 32(White)----------RXD (receive data)

2. How to connect the RFID card reader?



The Baud of the RFID card reader must be 9600. You can see the USB cable have four cables, Please find the every cable and connect each cable in the right way, just as the picture i show you. We define the serial port1 connect the RFID card reader.

The Black cable----------GND (connect the Pin23)

The Red cable----------VCC(5V) (connect the Pin27)

The Whit cable----------TXD (connect the Pin28)

The Green cable----------RXD (connect the Pin29)

3. How to connect the camera?

You can see the camera have four cables, and the serial input port2 also have four cables. Maybe different cameras have the different color of the cable. Please check the manual to find out the ACC, GND, TXD,RXT and connect it with the cable in the right way. Then you press SOS, It will shoot a picture and save it in the memory, and send out by GPRS.

You server must match this function and analyse the data to a picture.

Maybe different camera have the different color of the cable. Please check the manual to find out the Acc, GND, TXD,RXT and connect it with the cable in the right way.

We define the serial port2 connect the camera, you can see the four cables:

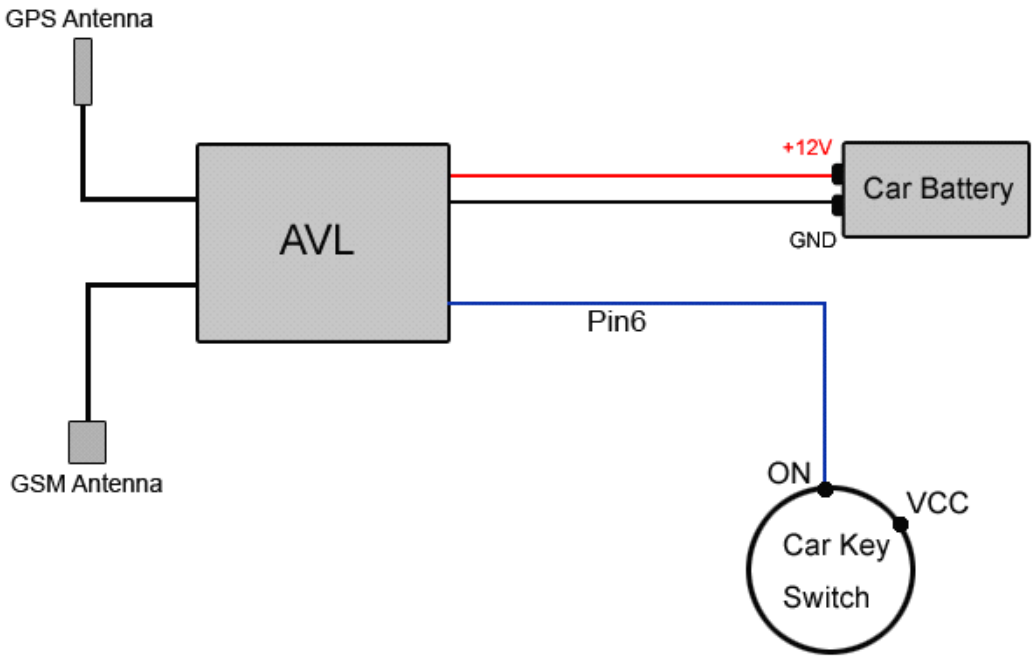
The Green cable---------- Vcc (5V) (connect the Pin33)

The Black cable---------- GND (connect the Pin34)

The Yellow cable---------- TXD (connect the Pin31)

The Red cable---------- RXD (connect the Pin32)

1.3.5 Detect Car ON/OFF



Connect AVL Pin6 to the Car Key Switch , to the ON point.

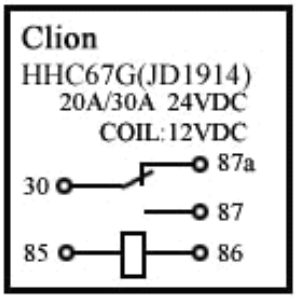
When Car Switch On, AVL will send Alarm to Server, type is 52

When Car Switch Off, AVL will send Alarm to Server, type is 53

When finish this connect, in every GPRS data will have the state of Engine

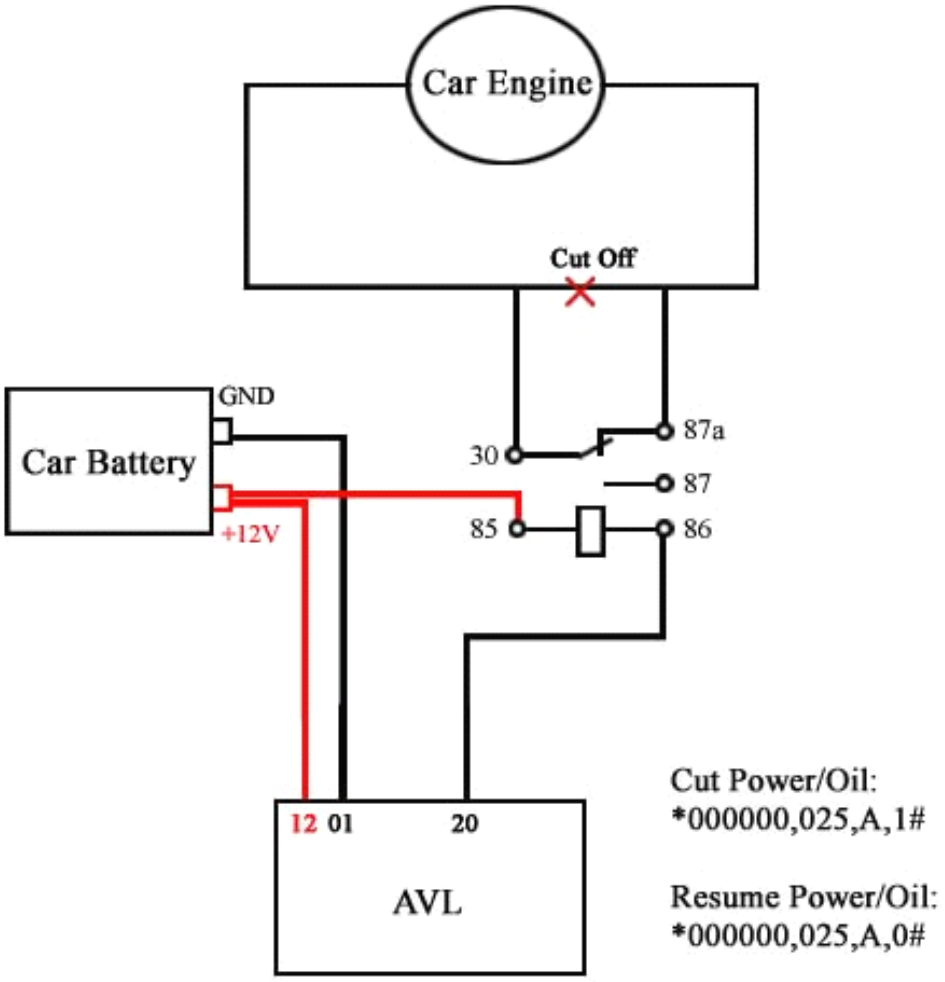
1.3.6 Connect Relay to control the Car Oil/Power (Port 20/19/18/17)

Diagram Of Relay

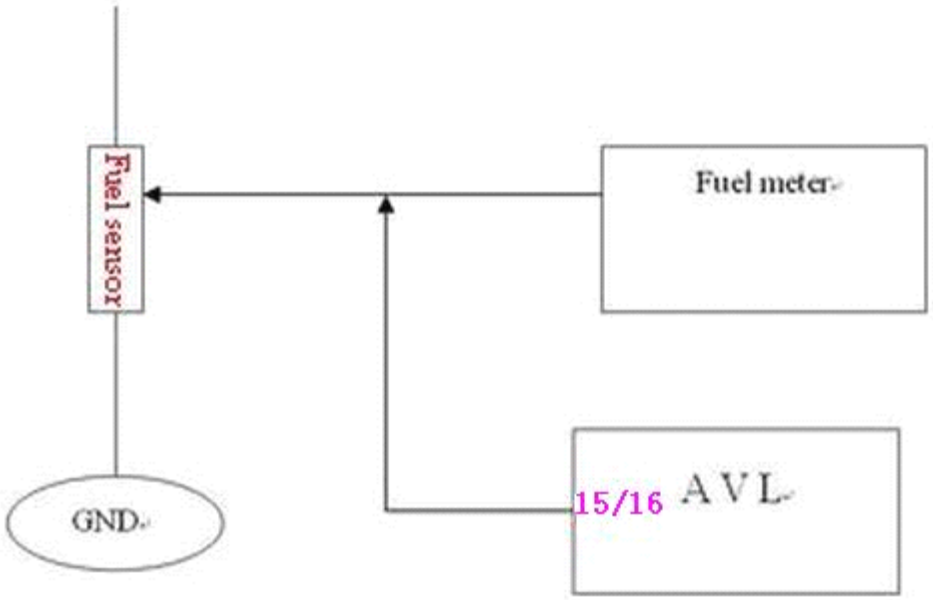


Step:
1.Connect AVL pin 12 to Car Battery +12V
2.Connect AVL pin 01 to GND
3.Cut off the circle of Car Engine
4.Relay port 30 and port 87a connect to Car Engine
5.Relay port 85 connect to Car Battery +12V power
6.Relay port 86 connect to AVL08 pin 20

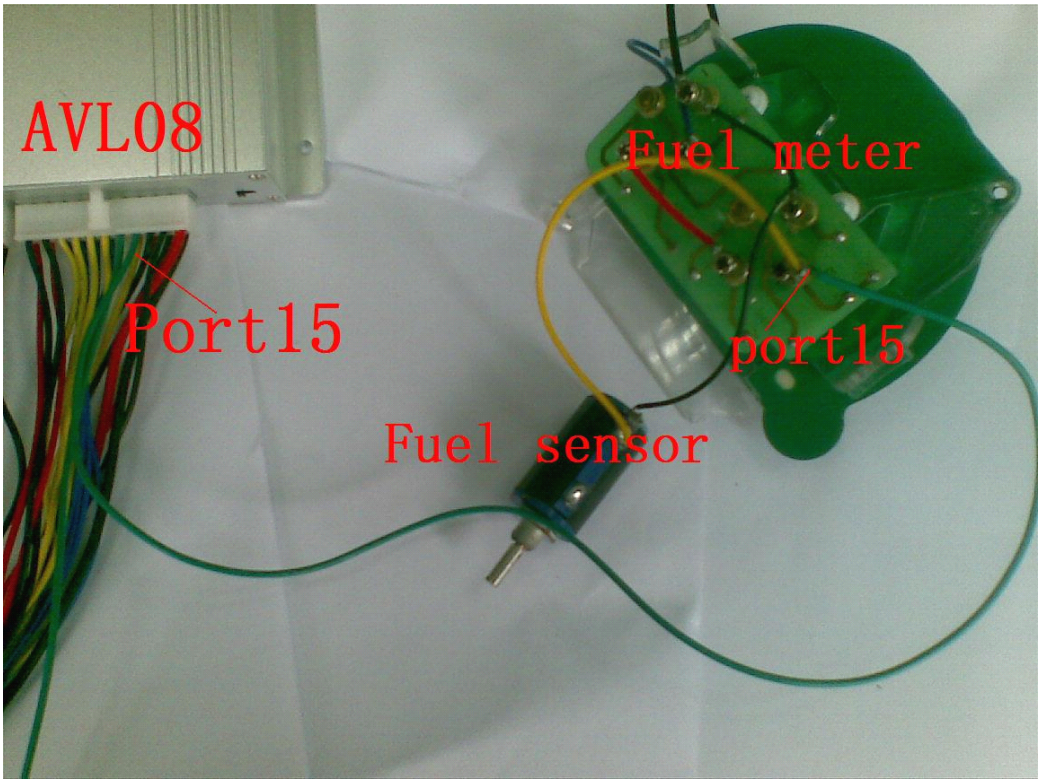
Diagram Of AVL08



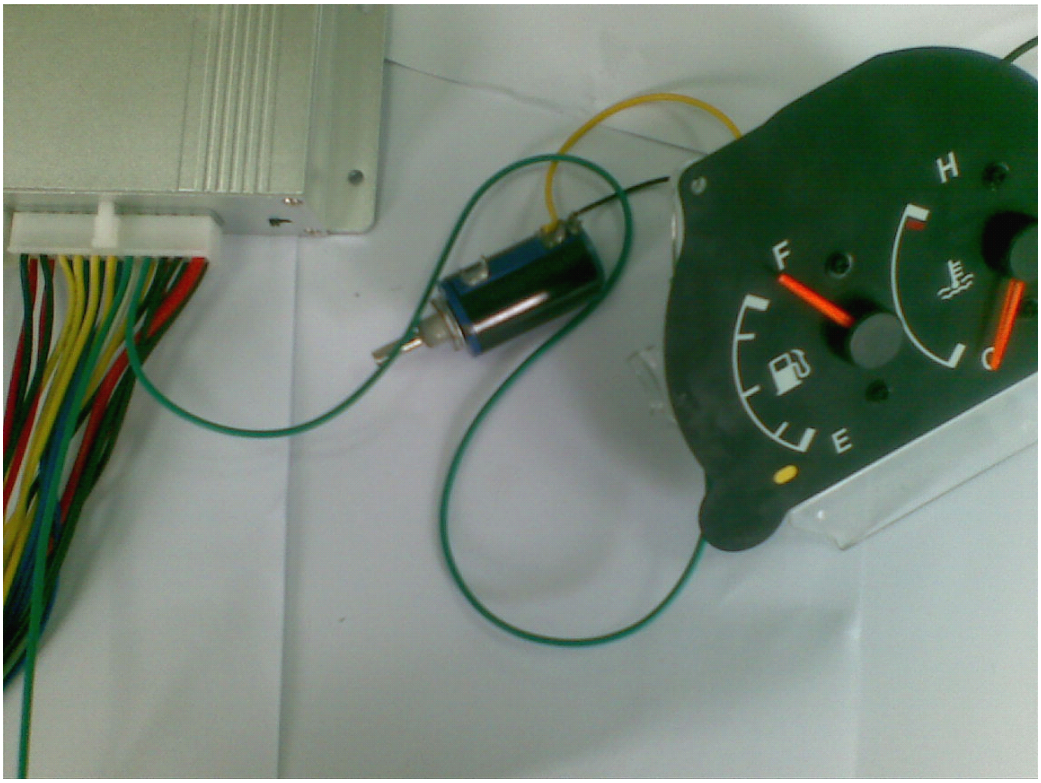
1.3.7 Connect to the fuel sensor to detect the fuel.(port 15/16)



Our AVL can get the voltage by the AD collection and according to the voltage change to know the fuel level in the tank. because the fuel tank in different car is different .so you need to find out the different relation between the voltage and fuel .our AVL can collect the voltage from 0-18V.so that mean if you want to know the fuel leave in the fuel tank, so you should work out the coordinate relation between voltage and fuel in your server. When the GPRS data come to the server, the server work out fuel level in the tank by analyze the GPRS data.



Picture 1 (how to connection)



Picture 2 (About the fuel meter)

2. How to use the Product

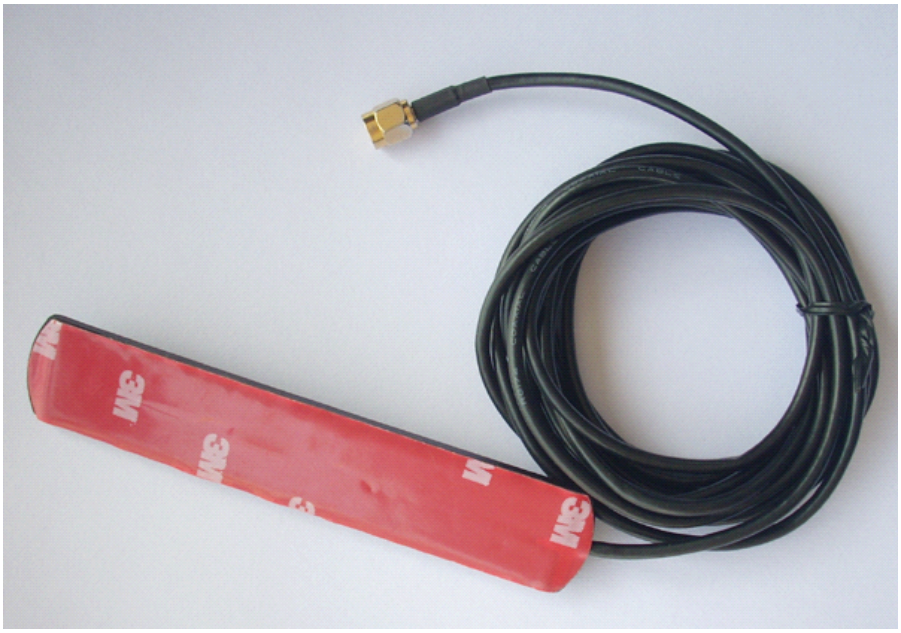
2.1 Prophase to prepare

Step1: Inset a SIM card.

Make sure the SIM card can communicate with other cards via SMS and call, and before installing the SIM card to the holder, please use a mobile phone to empty the SMS storage of the card

Step2: Connect GSM Antenna and GPS Antenna to AVL unit.

(GPS antenna)



(GSM antenna)

When you connect to the GSM and GPS antenna,pls make sure that it is until the connection is very firm.

Step 3: Fix the AVL connect to the exterior power by 12V.

Please refer to introduce about I/O ports, port1 and port 12 apart connect to the exterior power of anode and cathode.

Step 4: Turn on the AVL, observe the three LEDs in the AVL.

Turn on the AVL, you will see the three LEDs flash at the same time. It entered into initial mode.

After about 1 mins, the device will work normal, then you could look the LEDs of status and refer to introduce about 1.3.3 led indicators.

When AVL is in work mode, if GSM signal is in good state, the green led will flash, similarly, if GPS signal is in good state, the blue led will flash, if the green led is not flashing, that indicates the GSM signal is not good, if the blue led is not flashing, then you should check if there is something upon the GPS antenna top. Further, if you find the three LEDs are dark, maybe the AVL entered into "sleep-mode" or there is no power in the AVL unit.

Notes: As everyone knows, the GPS signal is very weak or have no GPS signal in the office .So pls put the AVL08 to the open air in order to receive the great GPS signal.

2.2 Use the command to set device by SMS

Notes: $$$$$$ is the password, and the default is:000000

If you want to modify the password :

The command of format:

***$$$$$$,001,@@@@@@#**

Explication: $$$$$$: the old password

@@@@@@: the new password

For example: *000000,001,123456#

After you send the command of SMS to device, it will reply to your mobile phone: Receive:'001'OK

***000000,001,123456#**

2.2.1 Use the GPRS function

Notes: At first of all, make sure the SIM card insert to the device and have the GPRS function.

Step1: Set the APN (Access Point Name)

Different network of provider have the different APN at every country, if you don't know, pls refer to the attachment.

Format: *$$$$$$,011,APN,Username,Password#

Notes: The username and password could to be null1.

For example: *000000,011,cmnet,,#

Explication: The China Mobile's APN is "cmnet", and the username and password are empty.

After you send the command of SMS to device, it will reply to your mobile phone: Receive:'011'OK

***000000,011,cmnet,,#**

Step2: Set the server's IP & PORT

Format: *$$$$$$,015,0,IP,PORT#

For example: *000000,015,0,72.167.29.18,3308#

72.167.29.18 is our server's IP address,3308 is the port.

If client have the server by himself, pls make sure the IP and port is correct.

After you send the command of SMS to device, it will reply to your mobile phone:

Receive:'015'OK

***000000,015,0,72.167.29.18,3308#**

Step3: Set Time Interval GPRS

Format: *$$$$$$,018,X,Y#

X: the time interval (unit is sec),Y: the times of the data have to send by GPRS.

For example:*000000,018,60,999#

The device will send GPRS every 1 mins and no times limit.

After you send the command of SMS to device, it will reply to your mobile phone: Receive:'018'OK

***000000,018,60,999#**

Step4: Open the GPRS function

Format: *$$$$$$,016,X#

X: close/open the GPRS function,

For example: *000000,016,1#

After you send the command of SMS to device, it will reply to your mobile phone: Receive:'016'OK

***000000,016,1#**

2.2.2 Set the sleep mode

Step1: open the sleep mode and the tremble sensor

Format: *$$$$$$,021,XY#

X: close/open the sleep mode

Y: close/open the tremble sensor

For example: *000000,021,11#

When you want to use the sleep mode of function, make sure open the sleep mode and tremble sensor

After you send the command of SMS to device, it will reply to your mobile phone: Receive:'021'OK

***000000,021,11#**

Step2: set the time of no tremble into the sleep.

Format: *$$$$$$,044,X#

X: After the tremble sensor don't tremble for X second, tracker will into sleep mode(unit: sec)

For example: *000000,044,60#

If the device have not tremble for 60 sec, the device will into the sleep mode.

After you send the command of SMS to device, it will reply to your mobile phone: Receive:'044'OK

***000000,044,60#**

Step 3: set the time of tremble to wake up the device

Format: *$$$$$$,043,X#

X: After the tremble sensor continuance vibration for X second, device will wake up.

For example: *000000,043,30#

If the tremble sensor continuance vibration for 30 sec, device will wake up.

After you send the command of SMS to device, it will reply to your mobile

phone: Receive:'043'OK

***000000,043,30#**

2.2.3 Set the interval SMS

Step1: Set the SOS number

Format: *$$$$$$,003,0,F,CallNumber,SMS Number#

When the device send to SMS to mobile phone by interval, should to set a SOS number which the number of the mobile phone to receive the data.

For example: *000000,003,0,1,008613800755500, 008613800755500##

When set the SOS number, pls append the 00 and international number as the example.86 is the international number for china.

After you send the command of SMS to device, it will reply to your mobile phone:

Receive:'003'OK

***000000,003,0,1,008613800755500, 008613800755500#**

Step2: Set the interval time for SMS.

Format: *$$$$$$,002,X,Y#

X: Time interval (unit:mins)

Y: the times of the data have to send by SMS

For example:*000000,002,1,999#

The device will send SMS every 1 mins and no times limit.

After you send the command of SMS to device, it will reply to your mobile phone:

Receive:'002'OK

***000000,002,1,999#**

2.2.4 Other useful commands

- **Get current location:**
  ***$$$$$$,000#**

- **Get the IMEI from the device:**
  ***$$$$$$,801#**

- **Reboot the device by SMS:**
  ***$$$$$$,991#**

- **Initialization the device**
  ***$$$$$$,990,099#**

3 The format of the GPRS

The GPRS command server sent to device must be 8-bit ASCII format. The GPRS command must be same as sms command in this user guide.

The data of the device send to the server:

Format：$$(2 Bytes) + Len(2 Bytes) + IMEI(15 Bytes) + | + AlarmType(2 Bytes) + GPRMC + | + PDOP + | + HDOP + | + VDOP + | + Status(12 Bytes) + | + RTC(14 Bytes) + | + Voltage(8 Bytes) + | + ADC(8 Bytes) + | + LACCI(8 Bytes) + | + Temperature(4 Bytes) | + Mile-meter(14 Bytes)+ + | Serial(4 Bytes) + | RFID No(10 Byte)|+ Checksum (4 Byte) + \r\n(2 Bytes)

The format of ASCII:

$$B0353358019462410|AA$GPRMC,102156.000,A,2232.4690,N,11403.6847,E,0.00,,180909,,*15|02.0|01.2|01.6|000000001010|20090918102156|14181353|00000000|279311AA|0000|0.7614|0080|0123456789|D2B5

Code	Explanation
$$	2Bytes, indicates header of command from tracker unit to call centre, in ASCII code (hex is 0x24).
Len	2Bytes, indicates length of all command, including header and end (the array is first high to low).

IMEI	15Bytes, at most 20 bytes.
Alarm type	2Bytes, the GPRS data trigger type.
DATA	GPRMC string
	PDOP
	HDOP
	VDOP
	Status (12bytes)
	RTC (14bytes)
	Voltage(8bytes)
ADC	8bytes,the ADC value.
LACCI	Location information elements
Temperature	Temperature information
Odometer	Mileage data
Serial ID	4bytes, sign every GPRS data, the range is [0001-9999], then circle it again from 0001 to 9999.
RFID No	10bytes, the number of RFID card
Checksum	4Bytes, means CRC check of all the data ahead, CRC-16 modbus (Polynomial = 0xA001， initialize data is 0xffff) checksum, not including its own byte and end characters. For example: $$B0353358019462410\|AA$GPRMC,102156.000,A,2232.4690,N,11403.6847,E,0.00,,180909,,*15\|02.0\|01.2\|01.6\|000000001010\|20090918102156\|14181353\|00000000\|279311AA\|0000\|0.7614\|0080\|D2B5 D2B5= CRC-16 modbus ($$B0353358019462410|AA$GPRMC,102156.000,A,2232.4690,N,11403.6847,E,0.00,,180909,,*15|02.0|01.2|01.6|000000001010|20090918102156|14181353|00000000|279311AA|0000|0.7614|0080|).
\r\n	2Bytes, end char (hex format is 0x0d,0x0a).

- Alarm type
  - 0x01 SOS button is pressed
  - 0x49 Button A is pressed
  - 0x09 Auto Shutdown Alarm
  - 0x10 Low battery Alarm
  - 0x11 Over Speed Alarm
  - 0x13 Recover From Over Speed
  - 0x30 Parking Alarm
  - 0x42 Out Geo-fence Alarm

- 0x43 Into Geo-fence Alarm
- 0x50 IO-1 Close —digital input 1 closed
- 0x51 IO-1 Open —digital input 1 opened
- 0x52 IO-2 Close —digital input 2 closed
- 0x53 IO-2 Open —digital input 2 opened
- 0x54 IO-3 Close —digital input 3 close
- 0x55 IO-3 Open —digital input 3 opened
- 0x56 IO-4 Close —digital input 4 close
- 0x57 IO-4 Open —digital input 4 opened
- 0x60 Begin Charge
- 0x61 End Charge
- 0x66 Find a new RFID
- 0x77 Angle Alarm
- 0x88 Heartbeat
- 0x91 Into Sleep Mode
- 0x92 Wakeup From Sleep Mode
- 0xAA Interval GPRS data

- Status(12 Bytes) —— Status：
  - Byte 01 —— SOS button
  - Byte 02 —— Button A button
  - Byte 03 —— Reserved
  - Byte 04 —— Reserved
  - Byte 05 ——digital Input 1 the status of the digital input 1 PORT9 (some times connect to the engine, Positive Input 1)
  - Byte 06 ——digital Input 2 the status of the digital input 2 PORT8 (Positive Input 2)
  - Byte 07 ——digital Input 3 the status of the digital input 3 PORT7 (Positive Input 3)
  - Byte 08 ——digital Input 4 the status of the digital input 4 PORT6 (Positive Input 4)
  - Byte 09 ——Digital Out 1
  - Byte 10 ——Digital Out 2
  - Byte 11 ——Digital Out 3
  - Byte 12 ——Digital Out 4
- Voltage(8 Bytes) ——Value of the voltage：
  - Format：ABBBIIII
  - A —— Charge Status (0 = Off Charge , 1 = On Charge)
  - BBB —— Battery Voltage (For example, 367 mean 3.67V)
  - IIII —— Input Charge Voltage (For example, 1251 mean 12.51V)
- ADC(8 Bytes) —— AD collection：
  - Format：CCCCDDDD
  - CCCC —— ADA collect (For example, 1251 mean 12.51V)
  - DDDD —— ADB collect (For example, 1251 mean 12.51V)（reserve）
- LACCI(8 Bytes) —— Location information elements：

  - Format：LLLLCCCC
  - LLLL —— Location area code
  - CCCC —— Cell ID
- Temperature(4 Bytes) —— Temperature（reserve for the device has no temperature sensor）：
  - Format：STTT
  - Precision is 0.1℃
  - The first byte “S” mean sign， such as“0/1/-”
  - Eg：0345 mean +34.5℃，1234 mean +123.4℃，-123 mean -12.3℃
- Mile-meter(14 Bytes) —— Location information elements：
  - Format is AAAA.BBBBKm.
  - Four bytes after the radix point.
- Serial(4 Bytes) —— Serial number：
  - Format：SSSS
  - Every time reboot the device or reset,the serial number will initialize to 0001.
  - Every GPRS message send out will add one
  - After the serial number to 9999, restart from 0001 again

- RFID(10 Bytes) —— RFID information：
  - Format：SSSS
  - Show the information of the RFID.

The link of the explain about the CRC-16(modbus):

http://www.lammertbies.nl/comm/info/crc-calculation.html

4. SMS instruction list.

If you want to know more about the AVL, and design your special AVL, you can refer to the SMS instruction list.
$$$$$$ is user`s password, and initial password is 000000

	SMS Instruction	Format	Note
1	Request one position	*$$$$$$,000#	
2	Modify user password	*$$$$$$,001,@@@@@@#	$$$$$$ is old password @@@@@@ is new Password
3	Set the time intervals of position notice SMS The Position SMS will send to the preset SOS number.	*$$$$$$,002,X,Y#	X (Max 3 Digital) =0, Stop send position SMS =[1,60000] Time interval (Unit: mins) Y (Max 3 Digital) =[1,999） times send SMS Y=0, Disable this function Y=999, continue send SMS
4	Set a preset phone & SMS number for SOS button	*$$$$$$,003,0,F,CallNumber, SMS Number#	F = 0, Disable this function =1, Only send an alarm SMS to the preset SMS Number Notice :Tel Number and SMS Number (must <25 digits)
5	Set low power alarm When the AVL voltage is lower than the preset value, AVL will send one lower power alarm GPRS data to the Preset Server.	*$$$$$$,004,XXX,YYY#	XXX is the low power alarm voltage, eg: 3.8v,XXX=380 YYY is the auto shut down voltage, eg: 3.5v,YYY=350 For example： *$$$$$$,004,380,350#
6	Set over speed alarm When the AVL speed higher than the preset value, AVL will send one over speed alarm GPRS data to the Preset Server.	*$$$$$$,005,S,X,Y,Z#	S=1 Enable speed alarm, S=0 Disable speed alarm. X=[10<XXX<250] (The speed preset value) unit is km/h Y is the times over speed [1,999],unit is second Z=[10,360],(The time interval

			to send speed alarm) unit is second.
7	Set Geo-fence alarm When the AVL move out preset scope, AVL will send one Geo-fence GPRS data to the Preset Server.	*$$$$$$,006,+lat1,+long1,+lat2,+long2,X,Y# Lat=[-9000.0000,+9000.0000]	Lat=[-9000.0000,+9000.0000] Long=[-18000.0000,+18000.0000]is for time interval send alarm message. Y=0, Disable GEO-fence alarm. Y=1, Into GEO-fence alarm. Y=2, Out of GEO-fence alarm. Note:Long1>long2&lat1>lat2 Make sure the position of north latitude and east longitude set it (+),otherwise set it (-) Format:+AAAAA.BBBB Make sure set the two positions have the same digit after comma.
8	Extend setting	*$$$$$$,008,ABCDEFG#	A=0, Disable position report function which get position SMS by Calling A=1, Enable position report function which get position SMS by Calling B=0, Send the SMS in Text format. B=1, Send the SMS in NMEA format. C=1, AVL do NOT hung up when one call incoming C=0, AVL hung up after 4~5 rings when call incoming D=0 E=0, ADB Normal AD collect E=1, ADB Oil collect.(The average of two minutes to collect) F=0, ADA Normal AD collect F=1, ADA Oil collect.(The average of two minutes to collect) The difference of two method is: Normal AD collect will output the AD value currently

			AD collect percent will output the value of fuel percent. G=0
9	Change band	*$$$$$$,009,S#	S=0, work in 900/1800 S=1, work in 850/1900 S=2, Automatic selection *note: the default of parameter is S=2, Automatically select the frequency band, if the unit of GSM module support three frequency(900/1800/1900), then you could set the parameter to S=0, if the unit of GSM module support the four frequency(850/900/1800/1900),then you could set the parameter to S=1.
10	Set APN,Username,Password	*$$$$$$,011,APN,Username,Password#	APN : APN string (must < 28 chars) User name: Your username (must < 28 chars) Password: Your password (must < 28 chars) * If haven't username or password, then left it blank. For example: *000000,011,CMNET,,## (It haven't username and password)
11	Set DNS	*$$$$$$,014, X,DNS1,DNS2# Disable the DNS	X=0 Disable the DN X=1 Enable the DNS DNS is the domain name server , xxx.xxx.xxx.xxx
12	Set IP Address & port number	*$$$$$$,015,0,IP,PORT#	IP : xxx.xxx.xxx.xxx PORT : [1,65535]
13	Set the time intervals of GPRS Data	*$$$$$$,018,X,Y#	X (3 Digital) =0 stop send time interval GPRS =[10,999] Time interval (Unit: sec) Y (3 Digital) =0, stop send time interval GPRS = [1,999] After send YYY times

			stop. =999, continue send GPRS un-stop
14	Enable/Disable GPRS function	*$$$$$$,016,X#	X=0 Disable GPRS unctionX=1 Enable GPRS Function This is the last step of GPRS setting.
15	Set the GPRS mode	*$$$$$$,019,X#	X=0, Use the UDP mode X=1, Use the TCP mode
16	Tremble sensor switch	*$$$$$$,021,XY#	X = 0 Disable Sleep mode X = 1 Enable Sleep mode Y = 0 Disable the tremble sensor Y = 1 Enable the tremble sensor
17	Set the Module	*$$$$$$,022,X,Y#	X=0, Close the GPS module when into sleep X=1, Open the GPS module when into sleep. Y=0, Close the GSM module when into sleep Y=1, Open the GSM module when into sleep
18	Enable/Disable I/O port	*$$$$$$,025,X,Y#	X=A means the output port 2 Y=0, Out port is low (the oil of circuit is restore) Y=1, Out port is high (the oil of circuit will cut off) For Example: *000000,025,A,1#
19	Heart Beat Switch	*$$$$$$,040,X#	X=0 Disable the heart beat function X=1 Enable the heart beat function
20	Heart Beat Intervals	*$$$$$$,041,X#	X is the heart beat interval, unit is minute [1<X<9999] X=0, Disable this function.
21	Heart Beat Init	*$$$$$$,042,0#	When receive this command, the heart beat will re-count time
22	Into sleep mode when without tremble for preset time	*$$$$$$,044,X#	After the tremble sensor don't tremble for X second, tracker will into sleep mode 30< X <65536 (Unit : second)

			For Example, configure AVL08 into sleep mode after no tremble for 30 second: *000000,044,30#
23	Wake up from Tremble	*$$$$$$,043,X#	After the tremble sensor continuous tremble for X second, tracker will wake up X=[1,255) (Unit : second) AVL08 Wake up from sleep mode after no tremble for 10 second: *000000,043,10#
24	Parking alarm	*$$$$$$,110,X#	X=1 Enable Tremble alarm function, then if the AVL08 is Trembling for 5s continually, it will alarm(0x30), X=0 Disable Tremble alarm function
25	Reading the IMEI number	*$$$$$$,801#	This command to ask AVL reply the IMEI number and the firmware of version.
26	Initialization Tracker	*$$$$$$,990,099#	It will set all parameter to factory default value (Excluding the Password).
27	Reboot by SMS command	*$$$$$$,991#	It will reboot the AVL08 by this SMS command.
28	Set Oil sensor	*$$$$$$,113,A,B#	A,B=[0,2000], the real voltage is [0,20V]. A is the empty fuel of corresponding voltage, B is the full fuel of corresponding voltage. *note: Every different types of car have different corresponding relation. Pls test it by yourself, then set the command. Eg: *000000,113,100,500# Explain: it means empty fuel of corresponding voltage is 1V,and the he full fuel of corresponding voltage is 5V,if the AVL detect the voltage is 4V,then the value of fuel

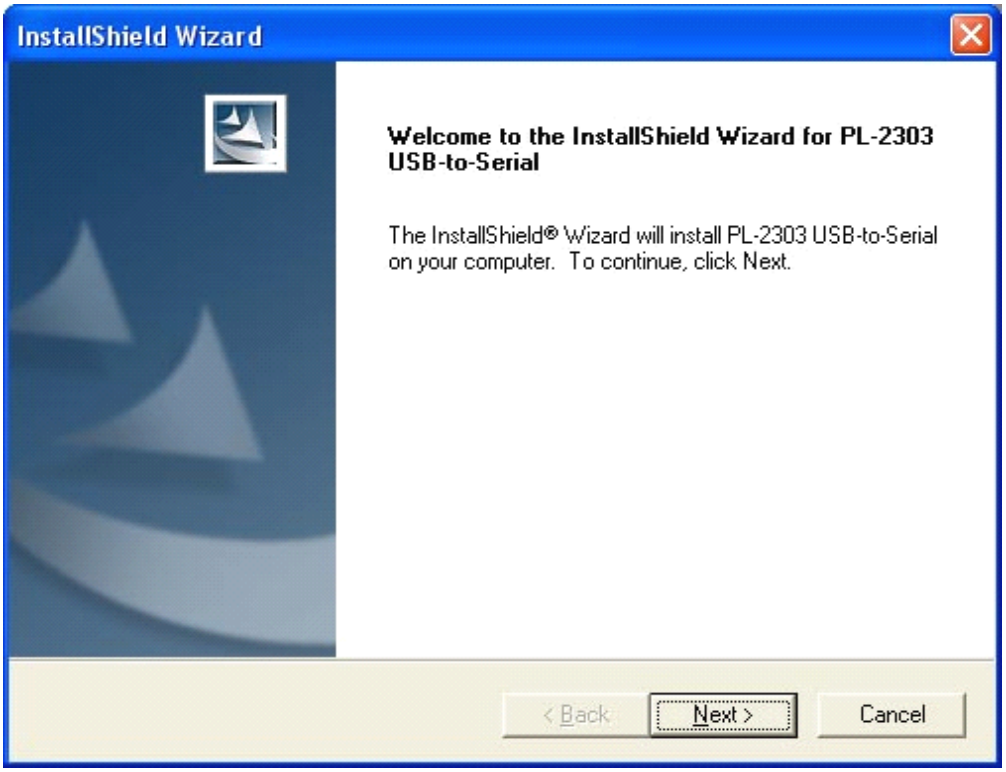
			percent is (4-1)/(5-1)=75%.
29	Set OutA Change	*$$$$$$,117,A,B,C,D#	A=[0,999]km/h , the thresold of speed. B=[0,60000] ms, the interval of outA off C=[0,60000] ms, the interval of OutA on D=[0,99], the times of OutA change If the speed is lower than, the OutA will off B seconds, then restore C seconds, repeat it D times. *note： because of the safety, you had better set the parameter like this: *000000,117,60,500,3000,5#
30	OutA Change switch	*$$$$$$,116,A#	A=1, active 117 command set . A=0, Don`t active 117 command set
31	Angle Alarm	*$$$$$$,300,X,Y#	X=0, Disable this function (Default) X=1, Active this function. X=2, Input 4 (Port 6) is high-frequency alarm when the open angle X=3, Input 3 (Port 7) is high-frequency alarm when the open angle Y= [1,360] Angle range
32	Reboot time	*$$$$$$,600,X,Y#	X=0,Disable his function (Default) X=1, Active this function. Y= [10,9999]/ Minutes, Reboot time interval
33	Acceleration and deceleration alarm	*$$$$$$,120,A,B,C#	A=0 Disable this function (Default) A=1 Active this function. B= [0,2000] Acceleration 0.1m/S’2 B= [0,2000] deceleration 0.1m/S’2

34	Way to send alarm information	*$$$$$$,119,X#	X=0 GPRS transmission (Default) Y=1 SMS transmission
35	Time taking pictures（Version is limited to camera）	*$$$$$$,200,X,Y#	X= [1,999]/Min Picture interval Y= [0,999]/Times The number of photographs
36	Clear data flash	*$$$$$$,500#	Clear stored in the flash memory inside the machine

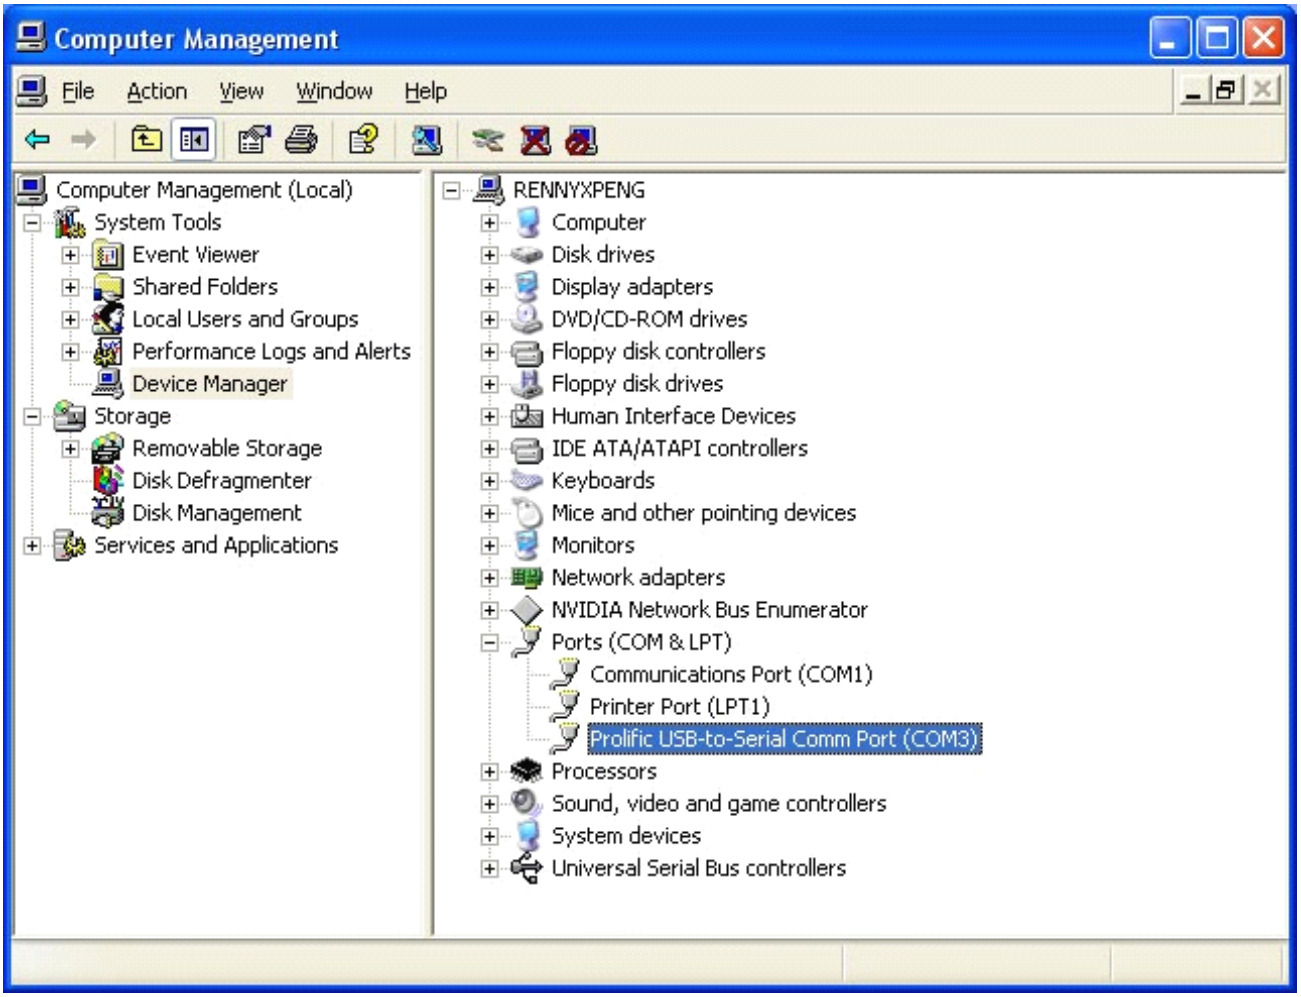
5. Update the firmware of the AVL

1）Install RS232 cable driver

A. At the first, Install the Driver for "USB Converter"



B. Connect the AVL unit to PC through RS232 cable, View the com port that the cable used

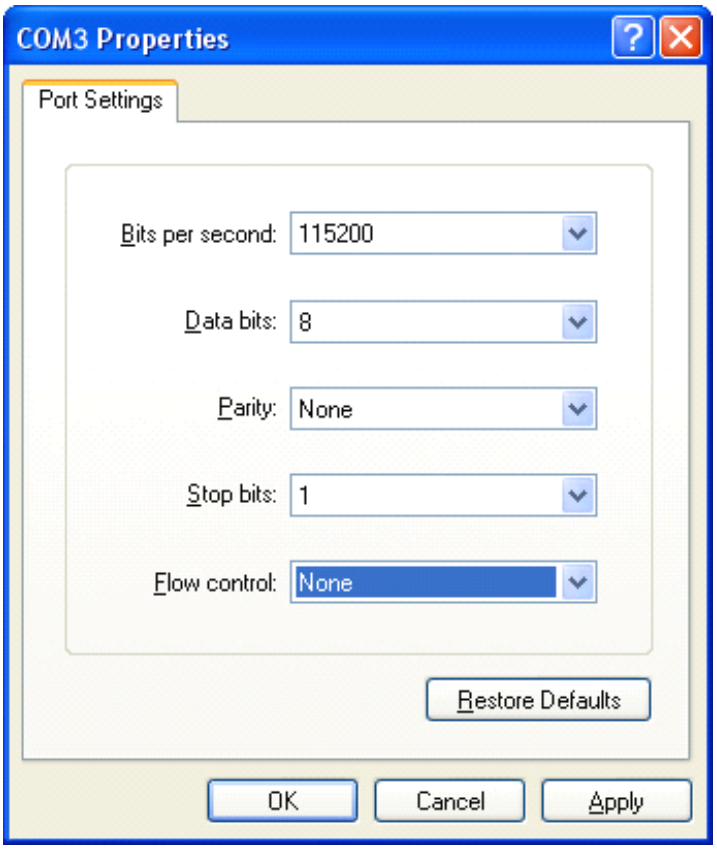


2）Turn on AVL device

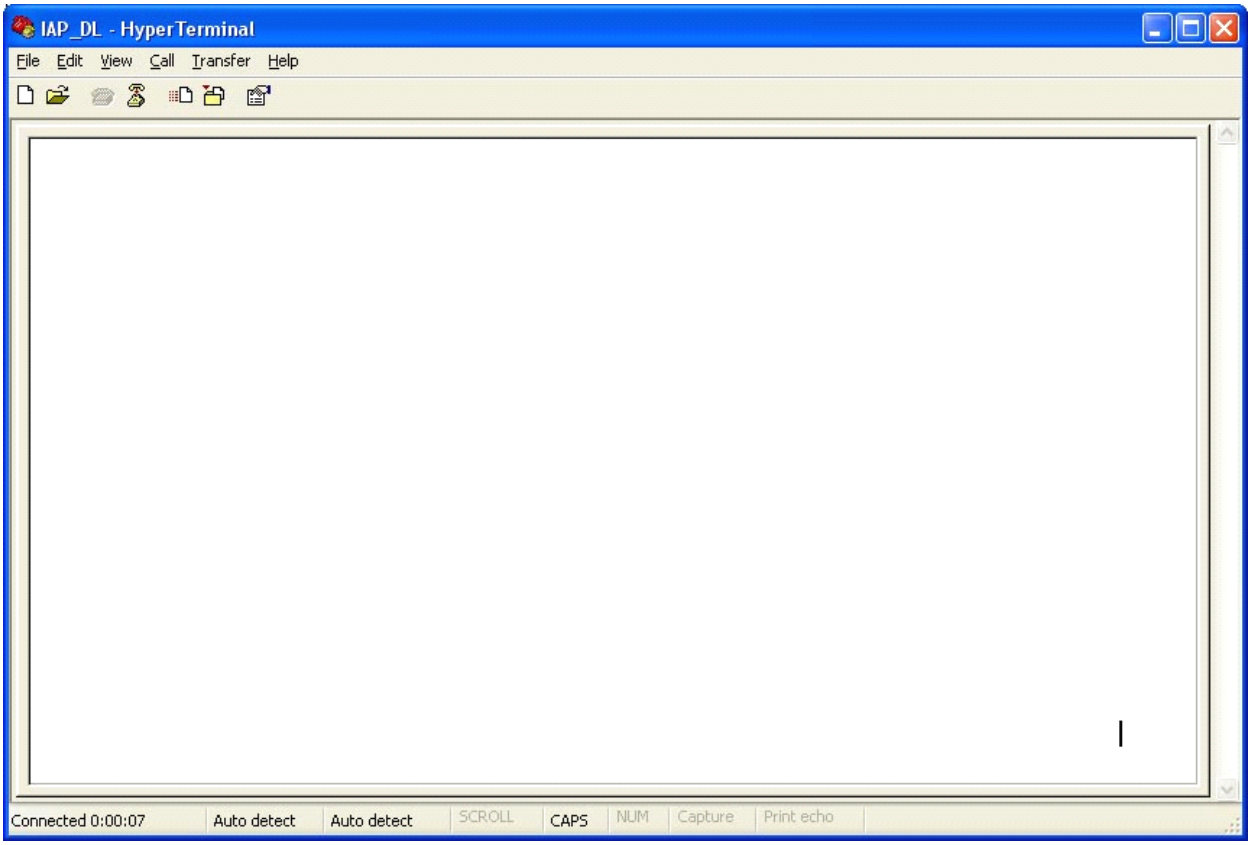
3）Build a New Hyper terminal connect, fill the name, example as IAP_DL

4）Choose the Com Port that the RS232 Cable used

Setup all the option like show in the picture follow

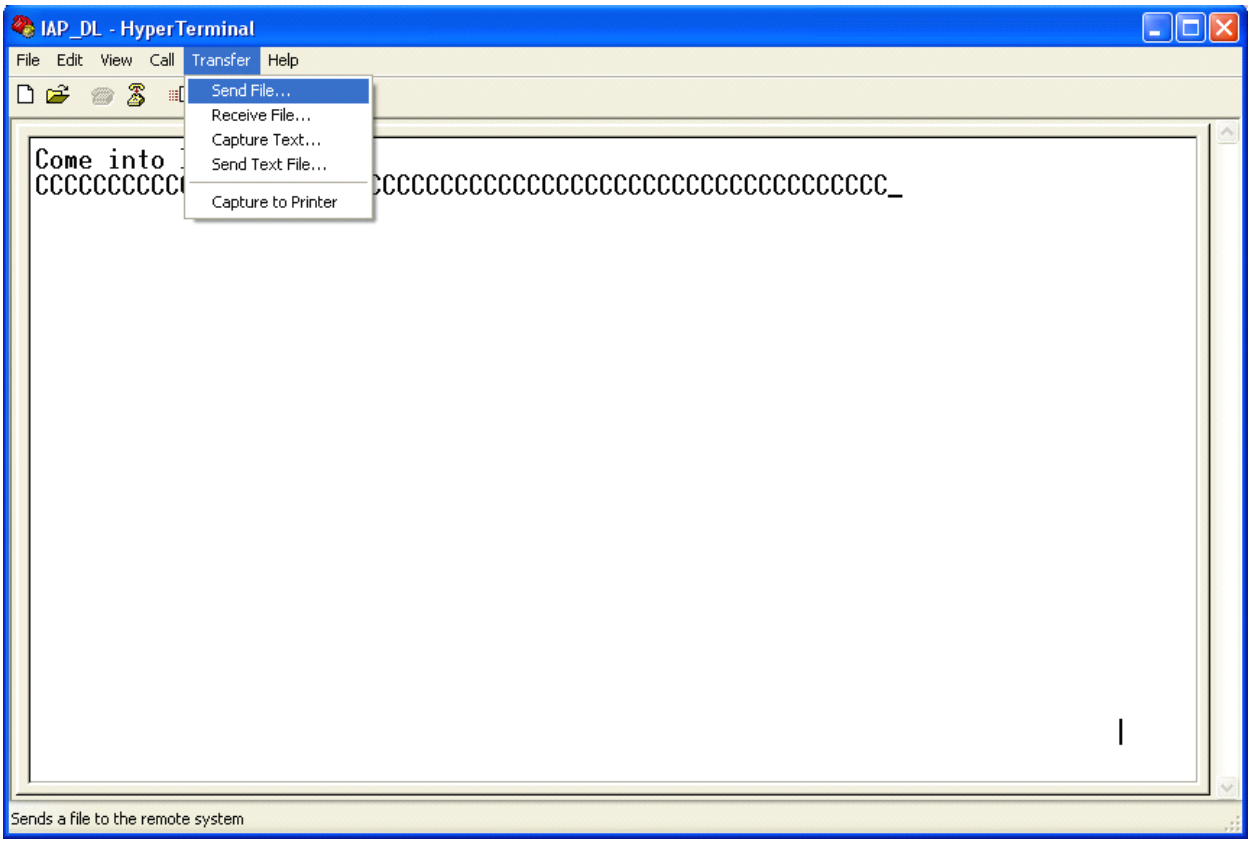


5）Into Configure Mode



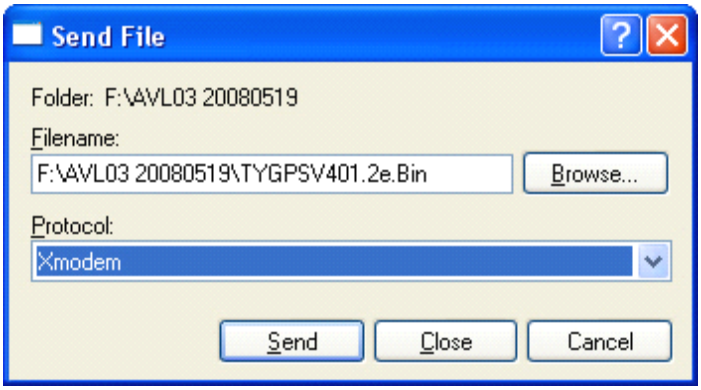
6）Turn Off AVL device

7）Press the Unit's SOS button and Turn on Power(Please hold it for several seconds)，Unit's GSM/GPS/Sensors LED will still light at same time， Hyper terminal will display the interface like the picture follow. Then choose Send file（Send-> Send File）

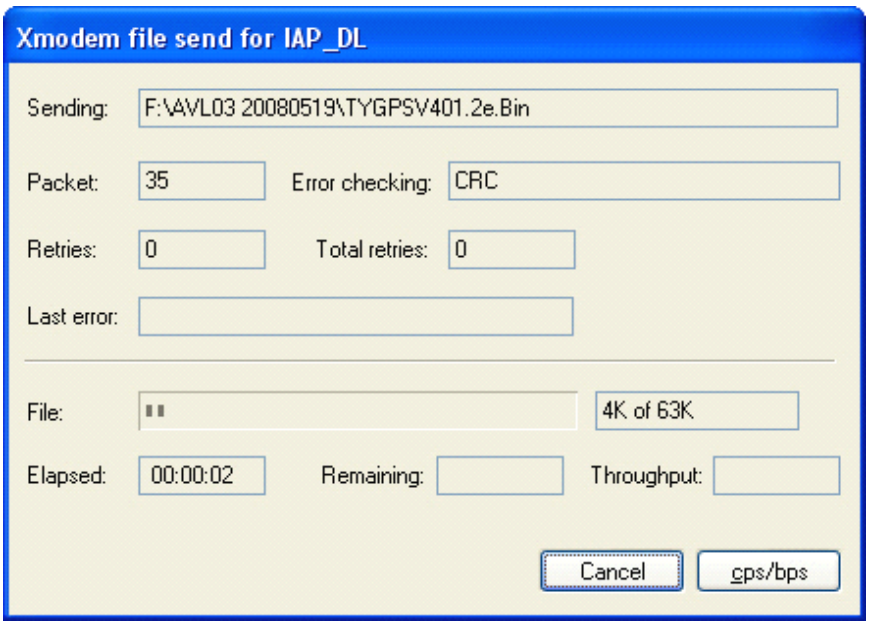


Choose the firmware that you want to Update;

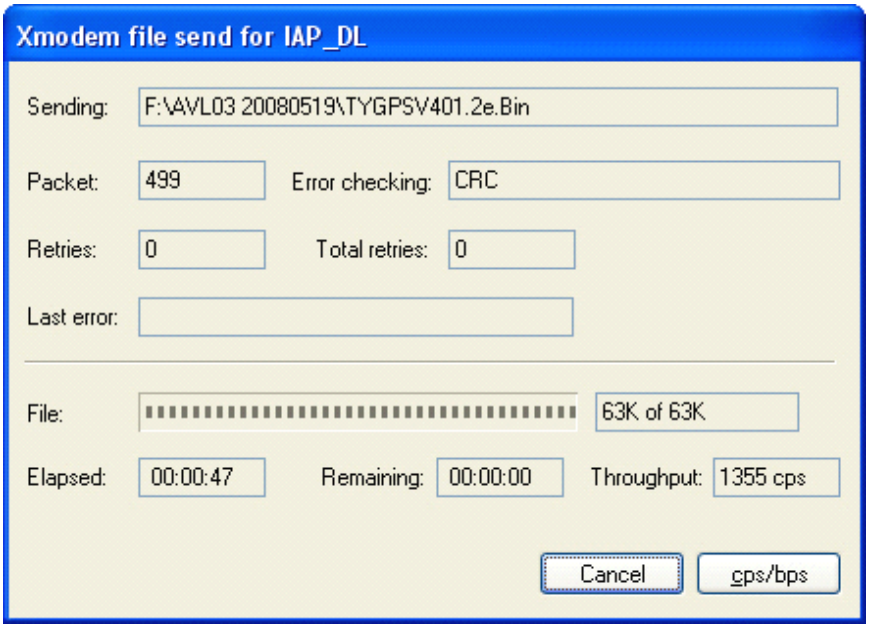
Protocol Choose: Xmodem



Press Send button, Will display a New Windows that show the update process.



(6) When finish Update, Tracker will reboot automatically, and the GSM/GPS/Sensors light will blink quickly. After about 3-5 mins, this interface will shut by itself. When the update is pressing, all indicator will off for 10 seconds, doesn't turn off power of AVL08, otherwise will cause MCU broken.



(7) When the AVL08 LED is blinking back to normal mode. Make sure about 2 mins later, then turn Off and Turn On AVL08 again.(at this times the firmware will load the parameter to the unit). Then the firmware updates finished.

6 Worldwide APN (Access Point Name) List

Country	Mobile operator	Access point name
Argentina	Personal	gprs.personal.com
